### Installation of the Fittings

- These fittings feature a compression ring that grips the tube and prevents it coming loose or leaking water.
- The higher the pressure the better the compression fittings hold onto the tube.
- We configured 3 x 3m and 2 x 2m hose to connect the system in the kit. If you would like to DIY, to ensure a good joint, the tube must be cut "square" and "burr free".

### Portable Installing the Misting System for outdoor activities

### Tap Installing the Misting System in garden environment

Start at the garden tap or water source point, using a garden hose, it is recommended that you install a hose fitting (included in the kit) to connect the mains water.

### Maintenance Of Your Misting System

Please use these hints to keep your misting system operational and prevent unnecessary clogging of the misting jets:

- 1) Drain Water from your System  
When your system is not in use, drain all water from your system.
- 2) Clean Nozzles  
Periodically clean all nozzles by soaking them in a solution of vinegar, or similar calcium and iron remover.
- 3) Flush System  
Periodically remove all nozzles and flush the system by running water through it for 4 or 5 minutes.
- 4) Clean Filter  
Periodically clean the filter by soaking in a solution of vinegar to remove calcium and iron build up.

### Warning

Do not overtighten the water pump to black hose fitting as this can stop water flow and damage the water pump.  
Do not run the water pump without an adequate amount of water in the bucket. Refer to the bucket's internal minimum fill line.  
To remove/install the black hoses please push the collar in on the fitting. Hoses must be pushed in as far as possible to prevent water leaks.
